

No Boundaries

DataPath Payment Solutions are helping payment administrators dominate the complex insurance payment landscape. High administrative costs, payment delays and duplications, manual errors, fraud, escheatment, and lost EOBs are major obstacles to successful indemnity and provider payment administration. Navigate these hazards with DataPath's workers' comp, provider payments, and Medicare Set Aside account solutions.

"To help ease the work load, we needed a payment solution that we could trust to deliver accurate payments quickly and enable us to automate a lot of the work. I wholeheartedly recommend Provider Payments."

— Paul Williams, Principal/Owner
DirectPay Provider Network, LLC

The Pain of Payment Processing

When payers use traditional processing methods, they can be plagued by high administrative costs, payment delays and duplications, manual errors, escheatment and lost EOBs. Trying to keep everything straight and mitigate rising costs can be a headache for payers.

For medical providers and injured workers, they find themselves frustrated with slow payments, payment errors, and a lack of full-time support. MSA recipients want convenient access to their settlement funds so they can get medical care.

DataPath is an end-to-end card and payment processor, and our cutting-edge solutions can reduce overall costs, provide secure transactions, and accelerate the payment process.

Provider Payments

Claims processing is complex and expensive. With multiple claims and EOBs to process for healthcare providers, payers find that manually processing payments can be costly in both time and money.

DataPath Provider Payments is a virtual payment solution that simplifies and streamlines the payment and EOB distribution process. Provider Payments helps reduce fraud, payment errors, processing costs, and high administrative fees. Through the secure and convenient web portal, providers can access both the EOB and the payment information, and payments process within a couple of days.

Workers' Compensation Payments by **renewCARD™**

Indemnity payments account for approximately 40 percent of claim costs. With injury severity on the rise and duration of recovery getting longer, the cost of workers' compensation continues to rise. What's more, an estimated 25 million workers are unbanked or underbanked. Payers need a way to ensure that injured workers get their funds in a timely manner while keeping costs under control.

RenewCard is a bank-neutral, reloadable debit card that workers can use everywhere Mastercard® is accepted. Plus, payers can eliminate slow, costly checks, and set up a reimbursement schedule that delivers payments on time, every time.

reliance card™ for MSA Accounts

For MSA recipients, getting the care they need and staying in compliance with CMS guidelines is challenging.

They need a convenient benefits debit card that links to their account and has robust record keeping features. RelianceCard links directly to their account and provides instant access to their funds. There's no need for claims reimbursement. Plus, they have access to DataPath's patented ClaimsVault®, an electronic 'shoebox' for records and receipts keeping. ClaimsVault is particularly useful during CMS reporting.
